# Package 'rworkflows'

March 14, 2023

```
Type Package
Title Test, Document, Containerise, and Deploy R Packages
Version 0.99.8
Description Reproducibility is essential to the progress of research,
      yet achieving it remains elusive even in computational fields.
      Continuous Integration (CI) platforms offer a powerful way to launch automated workflows
      to check and document code, but often require considerable time, effort,
      and technical expertise to setup. We therefore developed the rworkflows suite
      to make robust CI workflows easy and freely accessible to all R package developers.
      rworkflows consists of 1) a CRAN/Bioconductor-compatible R package template,
      2) an R package to quickly implement a standardised workflow, and
      3) a centrally maintained GitHub Action.
URL https://github.com/neurogenomics/rworkflows, https:

bioc\_r\_versions Bioconductor/R versions

# Description

Get the respective version of R for a given version of Bioconductor.

# Usage

```
bioc_r_versions(bioc_version = NULL, depth = NULL)
```

### **Arguments**

bioc\_version

Version of Bioc to return info for. Can be:

- "devel"Get the current development version of Bioc.
- "release"Get the current release version of Bioc.
- <numeric>A specific Bioc version number (e.g. 3.16).
- NULLReturn info for all Bioc versions.

construct\_authors 3

depth

How many levels deep into the R version to include. For example, is the R version number is "4.2.0", the following depths would return:

```
• depth=NULL: "4.2.0"
• depth=1: "4"
• depth=2: "4.2"
• depth=3: "4.2.0"
```

#### Value

Named list of Bioc/R versions

# **Examples**

```
ver <- bioc_r_versions(bioc_version="devel")</pre>
```

construct\_authors

Construct authors

# **Description**

Helper function to construct an author list for a DESCRIPTION file. Returns a template when authors is not provided (default).

# Usage

```
construct_authors(
 authors = NULL,
 template = c(utils::person(given = "yourGivenName", family = "yourFamilyName", role =
   c("cre"), email = "yourEmail@email.com", comment = c(ORCID = "yourOrcidId")))
```

#### **Arguments**

authors

A list of authors who contributed to your R package, each provided as objects of class person. By default, if an Authors field already exists in the DESCRIP-TION file, the original values are kept. Otherwise, a template person list is created using the construct\_authors.

template

Default value to return when authors=NULL.

#### Value

Named list in person format.

```
authors <- construct_authors()</pre>
```

4 construct\_runners

construct\_runners Construct runners

# Description

Construct runner configurations across multiple Operating Systems (OS) for GitHub Actions workflow.

# Usage

# Arguments

Which OS to launch GitHub Actions on.			
Which Bioconductor version to use on each OS. See bioc_r_versions documentation for all options.			
Which R version to use on each OS.			
Which Docker container to use on each OS (NULL means no container will be used for that OS). See here for a list of all official Bioconductor Docker container versions.			
Which R repository manager to use on each OS (NULL means the default will be used for that OS).			
versions_explicit			
Specify R/Bioc versions explicitly (e.g. r: 4.2.0, bioc: 3.16) as opposed to flexibly (e.g. r: "latest", bioc: "release").			

#### Value

Named list of configurations for each runner OS.

```
runners <- construct_runners()</pre>
```

dt\_to\_desc 5

able to desc	
--------------	--

### **Description**

Convert data.table containing the parsed *DESCROPTION* file data and convert each of them to to desc format.

# Usage

```
dt_to_desc(db, refs = NULL, verbose = TRUE)
```

### **Arguments**

db A data.table where each row is a different R package and each column is a field

from the DESCROPTION file.

refs Reference for one or more GitHub repository in owner/repo format (e.g. "neurogenomics/rworkflow

or an R package name (e.g. "rworkflows").

verbose Print messages.

# Value

A named list of desc objects.

# **Examples**

```
db <- BiocPkgTools::biocPkgList()
dl <- dt_to_desc(db=db, refs="GenomicRanges")</pre>
```

fill\_description Fill DESCRIPTION

# Description

Fill out a *DESCRIPTION* file, such as (but not limited to) the one provided by the templateR R package template. For any given field, set its corresponding argument as follows to get certain behaviour:

- NULL: Keeps the current value.
- NA: Removes the field from the *DESCRIPTION* file entirely.

6 fill\_description

#### Usage

```
fill_description(
  path = here::here("DESCRIPTION"),
  package,
  title,
  description,
  github_owner = NULL,
  github_repo = package,
  authors = construct_authors(authors = NULL),
 depends = paste0("R ", "(>= ", bioc_r_versions(bioc_version = "devel", depth = 2)$r,
    ")"),
  imports = infer_deps(which = "Imports", add_newlines = TRUE),
  suggests = infer_deps(which = "Suggests", add_newlines = TRUE),
  remotes = NULL,
  version = NULL,
  license = NULL,
  encoding = NULL,
  vignettebuilder = NULL,
  biocviews = infer_biocviews(pkgdir = dirname(path), add_newlines = TRUE),
  url = paste0("https://github.com/", github_owner, "/", github_repo),
  bugreports = paste0(url, "/issues"),
  save_path = path,
  verbose = TRUE,
  fields = list()
)
```

### **Arguments**

path	Path to the DESCRIPTION file.				
package	The name of your R package.				
title	The title of your R package.				
description	The description of your R package.				
github_owner	The owner of your R package's GitHub repository. Can be inferred from the URL field in the <i>DESCRIPTION</i> file if this has already been filled out.				
github_repo	The name of your R package's GitHub repository.				
authors	A list of authors who contributed to your R package, each provided as objects of class person. By default, if an Authors field already exists in the <i>DESCRIP-TION</i> file, the original values are kept. Otherwise, a template person list is created using the construct_authors.				
depends	R package Depends. Defaults to the version of R that the current development version of Bioconductor depends on.				
imports	R package Imports. These dependencies will be automatically installed with your R package.				
suggests	R package Suggests. These dependencies will NOT be automatically installed with your R package, unless otherwise specified by users during installation				
remotes	R package Remotes				
version	The current version of your R package (e.g 0.99.0).				
license	R package license. See here for guidance.				

get\_description 7

encoding R package Encoding.

vignettebuilder

R package VignetteBuilder.

biocviews Standardised biocViews terms used to describe your package. Defaults to au-

tomatically recommending terms using the infer biocviews function. Note that

non-Bioconductor packages (e.g. CRAN) can also use this field.

url URL where your R package is distributed from (e.g. GitHub repository, Biocon-

ductor page, and/or CRAN page). Can be a single character string or a character

vector.

bugreports A URL where users of your package should go if they encounter bugs or have

feature requests.

save\_path Path to save the updated DESCRIPTION file to. Defaults to overwriting the

input file (path). Set to NULL if you wish to only return the description object

without writing to any file.

verbose Print messages.

fields A named list of additional fields to fill the *DESCRIPTION* file with: e.g. list(RoxygenNote=7.2.3)

#### Value

An object of class description.

#### **Examples**

```
#### Get example DESCRIPTION file ####
url <- "https://github.com/neurogenomics/templateR/raw/master/DESCRIPTION"</pre>
path <- tempfile(fileext = "DESCRIPTION")</pre>
utils::download.file(url,path)
#### Fill out DESCRIPTION file ####
d <- fill_description(</pre>
  path = path,
  package = "MyPackageName",
  title = "This Package Does Awesome Stuff",
  description = paste(
    "MyPackageName does several awesome things.",
    "Describe thing1.",
    "Describe thing2.",
    "Describe thing3."
  ),
  github_owner = "OwnerName",
  biocviews = c("Genetics", "SystemsBiology"))
```

get\_description

Get DESCRIPTION

# Description

The Liam Neeson of DESCRIPTION file functions.

- 1. I will look for you,
- 2. I will find you,

get\_hex

3. ...and I will import you into a neatly parsed R object.

Uses a variety of alternative methods, including searching locally and on GitHub (whenever possible). Prioritises the fastest methods that do not involve downloading files first.

# Usage

```
get_description(
  refs = NULL,
  paths = here::here("DESCRIPTION"),
  cache_dir = tools::R_user_dir(package = "rworkflows", which = "cache"),
  force_new = FALSE,
  use_wd = TRUE,
  use_repos = TRUE,
  verbose = TRUE
)
```

### **Arguments**

refs	Reference for one or more GitHub repository in owner/repo format (e.g. "neurogenomics/rworkflow or an R package name (e.g. "rworkflows").
paths	Paths to DESCRIPTION file(s) R package(s).
cache_dir	Directory where to cache downloaded files.
force_new	Ignore cached files and re-download them instead.
use_wd	Search the local working directory (and the one above it) for <i>DESCRIPTION</i> files.
use_repos	Use R standard R package repositories like CRAN and Bioc to find <i>DESCRIP-TION</i> files.
verbose	Print messages.

# Value

A named list of packageDescription objects.

# **Examples**

```
d <- get_description(refs="neurogenomics/rworkflows")</pre>
```

get_hex
---------

# **Description**

Get the URL of a hex sticker for a given R package (if one exists).

infer\_biocviews 9

#### Usage

```
get_hex(
  refs = NULL,
  paths = here::here("DESCRIPTION"),
  hex_path = "inst/hex/hex.png",
  branch = c("master", "main", "dev"),
  hex_height = 300,
  check_url = TRUE,
  add_html = TRUE,
  verbose = TRUE
)
```

#### **Arguments**

refs Reference for one or more GitHub repository in owner/repo format (e.g. "neurogenomics/rworkflow

or an R package name (e.g. "rworkflows").

paths Paths to DESCRIPTION file(s) R package(s).

hex\_path Path to hex sticker file.

branch Name of the GitHub repository branch to use.

hex\_height Height of the hex sticker in pixels (when add\_hex=TRUE).

check\_url Check whether the URL actually exists.

add\_html Wrap the URL in an html "img" tag and set its height with hex\_height.

verbose Print messages.

#### Value

URL

# Examples

### **Description**

Infer the best terms to fill the biocViews field in your *DESCRIPTION* file based on the code within your R package. By default, also includes any biocViews that are already present in the *DESCRIPTION* file. Please see the Bioconductor website for more details.

10 infer\_deps

#### Usage

```
infer_biocviews(
  pkgdir = here::here(),
  branch = c("Software", "AnnotationData", "ExperimentData")[1],
  type = c("recommended", "current", "remove"),
  keep_current = TRUE,
  include_branch = TRUE,
  biocviews = NULL,
  add_newlines = FALSE,
  verbose = TRUE
)
```

#### **Arguments**

pkgdir The path of the package Directory.

branch The branch which your package will belong to. It can be either 'Software',

'AnnotationData' or 'ExperimentData'.

type Which element of the recommendBiocViews results list to return. If a vector is

supplied, only the first value will be used.

keep\_current Keep any biocViews terms that are already included in the DESCRIPTION file.

include\_branch Whether to include the branch argument as one of the returned biocViews.

biocviews User-supplied biocViews terms to include in addition to the automated recom-

mendations.

add\_newlines Prefix each package name with a newline character and two spaces. This is

useful for formatting DESCRIPTION files.

verbose Print messages.

#### **Examples**

```
## Don't run simply bc biocViews::recommendBiocViews is unable
## to find the DESCRIPTION file when running examples.
## Not run:
biocviews <- infer_biocviews()
## End(Not run)</pre>
```

infer\_deps

Infer dependencies

### **Description**

Infers the R packages that your R package depends on.

infer\_deps 11

#### Usage

```
infer_deps(
  path = here::here(),
  which = c("Imports", "Suggests"),
  imports_thresh = 2,
  imports = NULL,
  suggests = c("testthat", "rmarkdown", "markdown", "knitr", "remotes", "knitr", "covr"),
  errors = c("reported", "fatal", "ignored"),
  dev = FALSE,
  progress = TRUE,
  add_newlines = FALSE
)
```

### **Arguments**

path	The path to a	(possibly mu	ılti-mode) R file,	or a directory	containing such files.
			_		

By default, all files within the current working directory are checked, recur-

sively.

which Which types of dependencies to return.

imports\_thresh The minimum number of times that a package has to be called within your pack-

age to assign it as an Import. If is called less times than this threshold, it will instead be assigned as a Suggest, which means it will not be installed by default.

imports R packages that are exempt from the suggests\_thresh rule and are instead

automatically assigned as Imports.

suggests R packages that are exempt from the suggests\_thresh rule and are instead

automatically assigned as Suggests.

errors How should errors that occur during dependency enumeration be handled? See

**Errors** for more details.

dev Boolean; include 'development' dependencies as well? That is, packages which

may be required during development but are unlikely to be required during run-

time for your project. By default, only runtime dependencies are returned.

progress Boolean; report progress output while enumerating dependencies?

useful for formatting DESCRIPTION files.

#### Value

A character vector of R package names.

```
deps <- infer_deps()</pre>
```

12 use\_badges

is\_gha

Is GitHub Action

### **Description**

Tests whether a function is currently being run within a GitHub Actions workflow or not.

#### Usage

```
is_gha(var = "GITHUB_ACTION", verbose = TRUE)
```

### **Arguments**

var Environmental variable to check.

verbose Print messages.

#### **Source**

GitHub Actions docs

### **Examples**

```
is_gha()
```

use\_badges

Use badges

### **Description**

Create one or more badges showing the status of your R package. Uses the package badger.

### Usage

```
use_badges(
  ref = NULL,
  add_hex = TRUE,
  add_actions = "rworkflows",
  add_doi = NULL,
  add_lifecycle = FALSE,
  add_github_version = TRUE,
  add_commit = TRUE,
  add_code_size = TRUE,
  add_license = TRUE,
  add_authors = TRUE,
  add_codecov = TRUE,
  add_codecov_graphs = "icicle",
  add_bioc_release = FALSE,
  add_bioc_download_month = FALSE,
  add_bioc_download_total = FALSE,
  add_bioc_download_rank = FALSE,
```

use\_badges 13

```
add_cran_release = FALSE,
add_cran_checks = FALSE,
add_cran_download_month = FALSE,
add_cran_download_total = FALSE,
branch = "master",
as_list = FALSE,
sep = "\n",
hex_height = 300,
codecov_graph_width = 200,
colors = list(github = "black", bioc = "green", cran = "black", default = "blue",
    lifecycle = NULL),
verbose = TRUE
)
```

#### **Arguments**

ref Reference for a GitHub repository. If NULL (the default), the reference is deter-

mined by the URL field in the DESCRIPTION file.

add\_hex Add a hex sticker. If add\_hex=TRUE, will assume the sticker is located at the

following relative path: "inst/hex/hex.png". If add\_hex is a character string, this will instead be used as the relative hex path (e.g. "/images/mysticker.png").

add\_actions The name of one or more GitHub Actions to show the status for with badge\_github\_actions

(e.g. c("rworkflows","rworkflows\_static")).

add\_doi Add the DOI of a given package or publication associated with the package us-

ing badge\_doi. Must be provided as a character string, e.g.: "10.1111/2041-210X.12628"

add\_lifecycle Add package lifecycle stage. If not FALSE, must be a character string indicating

one of the following valid lifecycle stage:

• "stable"

· "deprecated"

· "superseded"

· "experimental"

See lifecycle.r-lib.org for further details.

add\_github\_version

Add package version with badge\_github\_version.

add\_commit Add the last GitHub repo commit date with badge\_last\_commit.

add\_code\_size Add code size with badge\_code\_size.

add\_license Add license info with badge\_license.

add\_authors Add author names inferred from the DESCRIPTION file.

add\_codecov Add Codecov status with badge\_codecov. See the Codecov site for more infor-

mation about these badges.

add\_codecov\_graphs

Add Codecov graphs visualising results of code coverage tests. Options include:

- "sunburst"
- "tree"
- "icicle"

See the Codecov site for more information about each plot type.

add\_bioc\_release

Add Bioc release version with badge\_bioc\_release.

14 use\_dockerfile

```
\verb"add_bioc_download_month"
```

Add the number of Bioc downloads last month badge\_bioc\_download.

add\_bioc\_download\_total

Add the number of Bioc downloads total badge\_bioc\_download.

add\_bioc\_download\_rank

Add the download rank of the package on Bioc badge\_bioc\_download\_rank.

add\_cran\_release

Add Bioc release version with badge\_cran\_release.

add\_cran\_checks

Add whether package is passing all checks on CRAN with badge\_cran\_checks.

 ${\tt add\_cran\_download\_month}$ 

Add the number of CRAN downloads last month badge\_cran\_download.

add\_cran\_download\_total

Add the number of CRAN downloads total badge\_cran\_download.

branch Name of the GitHub repository branch to use.

as\_list Return the header as a named list (TRUE), or a collapsed text string (default:

FALSE).

sep Character to separate each item in the list with using paste.

hex\_height Height of the hex sticker in pixels (when add\_hex=TRUE).

codecov\_graph\_width

Width of each Codecov graph in pixels (when add\_codecov\_graph!=FALSE).

colors Colors to assign to each group of badges (when possible).

verbose Print messages.

#### Value

A named list of selected badges in markdown format.

# **Examples**

```
badges <- rworkflows::use_badges(ref = "neurogenomics/rworkflows")</pre>
```

use\_dockerfile

Use Dockerfile

### **Description**

Creates a Docker file to be used with the GitHub Actions (GHA) workflows distributed by **rworkflows**.

### Usage

```
use_dockerfile(
  save_dir = here::here(),
  path = file.path(save_dir, "Dockerfile"),
  force_new = FALSE,
  show = FALSE,
  verbose = TRUE
)
```

use\_issue\_template 15

#### **Arguments**

save\_dir Directory to save the Docker file to.

path Path to the Docker file.

force\_new If a Docker file already exists, overwrite it (default: FALSE).

show Print the contents of the Docker file in the R console.

verbose Print messages.

### Value

Path to Docker file.

# **Examples**

```
path <- use_dockerfile(save_dir=tempdir())</pre>
```

use\_issue\_template

Use Issue Template

#### **Description**

Creates one or more Issue Templates to be used in a GitHub repository.

### Usage

```
use_issue_template(
  templates = c("bug_report.md", "feature_request.md"),
  save_dir = here::here(".github", "ISSUE_TEMPLATE"),
  path = file.path(save_dir, templates),
  force_new = FALSE,
  show = FALSE,
  verbose = TRUE
)
```

# **Arguments**

templates The names of templates to be used. save\_dir Directory to save the Docker file to.

path Path to the Docker file.

force\_new If a Docker file already exists, overwrite it (default: FALSE).

show Print the contents of the Docker file in the R console.

verbose Print messages.

#### Value

Path to Issue Templates.

```
path <- use_issue_template(save_dir=tempdir())</pre>
```

16 use\_vignette\_docker

use\_readme

Use README

# Description

Creates an rmarkdown README file that autofills using metadata from the R package *DESCRIP-TION* file.

# Usage

```
use_readme(
  save_dir = here::here(),
  path = file.path(save_dir, "README.Rmd"),
  force_new = FALSE,
  show = FALSE,
  verbose = TRUE
)
```

# **Arguments**

save\_dir Directory to save the vignette file to.

path Path to the vignette file.

force\_new If the file already exists, overwrite it (default: FALSE). show Print the contents of the vignette file in the R console.

verbose Print messages.

# Value

Path to README file.

# **Examples**

```
## use default save_dir in practice
path <- use_readme(save_dir = tempdir())</pre>
```

use\_vignette\_docker Use vignette: Docker

# Description

Creates a vignette rmarkdown file demonstrates how to create a Docker/Singularity image from a container stored in Dockerhub.

use\_vignette\_getstarted

#### Usage

```
use_vignette_docker(
  docker_org,
  title = "Docker/Singularity Containers",
  vignette_index_entry = "docker",
  save_dir = here::here(),
  path = file.path(save_dir, "vignettes", "docker.Rmd"),
  output = "BiocStyle::html_document",
  force_new = FALSE,
  show = FALSE,
  verbose = TRUE
)
```

# Arguments

docker\_org DockerHub organization name. Can simply be your Dockerhub username in-

stead.

title Title of vignette.

vignette\_index\_entry

Index entry of the vignette, which is used when creating the navigation bar in

the pkgdown site.

save\_dir Directory to save the vignette file to.

path Path to the vignette file.

output Vignette output style. Defaults to html\_document.

force\_new If the file already exists, overwrite it (default: FALSE). show Print the contents of the vignette file in the R console.

verbose Print messages.

#### Value

Path to vignette file.

# Examples

```
use\_vignette\_getstarted
```

Use vignette: Get started

# Description

Creates a "Get started" rmarkdown vignette file.

18 use\_workflow

#### Usage

```
use_vignette_getstarted(
  package,
  title = "Get started",
  vignette_index_entry = package,
  save_dir = here::here(),
  path = file.path(save_dir, "vignettes", paste0(package, ".Rmd")),
  output = "BiocStyle::html_document",
  force_new = FALSE,
  show = FALSE,
  verbose = TRUE
)
```

# **Arguments**

 $\begin{array}{ll} \text{package name.} \\ \text{title} & \text{Title of vignette.} \\ \text{vignette\_index\_entry} \end{array}$ 

Index entry of the vignette, which is used when creating the navigation bar in

the pkgdown site.

save\_dir Directory to save the vignette file to.

path Path to the vignette file.

output Vignette output style. Defaults to html\_document.

force\_new If the file already exists, overwrite it (default: FALSE).

show Print the contents of the vignette file in the R console.

verbose Print messages.

#### Value

Path to vignette file.

#### **Examples**

# **Description**

Create workflow that calls an rworkflows GitHub Actions (GHA)

use\_workflow 19

#### Usage

```
use_workflow(
 name = "rworkflows",
  tag = "@master",
  on = c("push", "pull_request"),
 branches = c("master", "main", "RELEASE_**"),
  runners = construct_runners(),
  run_bioccheck = FALSE,
  run_rcmdcheck = TRUE,
 as_cran = TRUE,
 run_vignettes = TRUE,
 has_testthat = TRUE,
  run_covr = TRUE,
  run_pkgdown = TRUE,
 has_runit = FALSE,
 has_latex = FALSE,
  run_docker = FALSE,
 github_token = "${{ secrets.PAT_GITHUB }}",
  docker_user = NULL,
  docker_org = docker_user,
  docker_token = "${{ secrets.DOCKER_TOKEN }}",
  cache_version = "cache-v1",
  enable_act = FALSE,
  save_dir = here::here(".github", "workflows"),
  return_path = TRUE,
  force_new = FALSE,
 preview = FALSE,
  verbose = TRUE
```

#### **Arguments**

tag

name Workflow name.

> • "rworkflows" A short workflow script that calls the GitHub action from the GitHub Marketplace. The action is continually updated so users do not need to worry about maintaining it.

> • "rworkflows static" A longer workflow scripts that explicitly copies all steps from the **rworkflows** action into a static file. Users may need to update this file themselves over time, though this does allow for a fully customisable workflow.

Which version of the rworkflows action to use. Can be a branch name on the

GitHub repository (e.g. "\@master"), or a Release Tag (e.g. "\@v1").

on GitHub trigger conditions.

branches GitHub trigger branches.

Runner configurations for multiple Operating Systems (OS), including R verrunners

sions, Bioc versions, and container sources. Can use the construct\_runners func-

tions to assist in constructing customized runners configurations.

Run Bioconductor checks using BiocCheck::BiocCheck(). Must pass in order run\_bioccheck

to continue workflow.

20 use\_workflow

run\_rcmdcheck Run R CMD checks using rcmdcheck::rcmdcheck(). Must pass in order to

continue workflow.

as\_cran When running R CMD checks, use the '-as-cran' flag to apply CRAN standards

run\_vignettes Build and check R package vignettes.

has\_testthat Run unit tests and report results.

run\_covr Run code coverage tests and publish results to codecov.

run\_pkgdown Knit the *README.Rmd* (if available), build documentation website, and deploy

to gh-pages branch.

has\_runit Run R Unit tests.

has\_latex Install a suite of LaTeX dependencies used for rendering Sweave (.rnw) and

other documentation files.

run\_docker Whether to build and push a Docker container to DockerHub.

github\_token Token for the repo. Can be passed in using secrets.PAT\_GITHUB.

docker\_user DockerHub username.

docker\_org DockerHub organization name. Is the same as docker\_user by default.

docker\_token DockerHub token.

cache\_version Name of the cache sudirectory to be used when reinstalling software in GHA.

enable\_act Whether to add extra lines to the yaml to enable local workflow checking with

act.

save\_dir Directory to save workflow to.

return\_path Return the path to the saved yaml workflow file (default: TRUE), or return the

yaml object directly.

force\_new If the GHA workflow yaml already exists, overwrite with new one (default:

FALSE).

preview Print the yaml file to the R console.

verbose Print messages.

#### Value

Path or yaml object.

#### **Source**

```
Issue reading in "on:"/"y","n" elements.
Issue writing "on:" as "'as':"
```

```
path <- use_workflow(save_dir = file.path(tempdir(), ".github", "workflows"))</pre>
```
